

Archive One *for SharePoint*

Control your data before it controls you

Archive One for SharePoint:

- ▶ Solves capacity problems created by the volume of data items and size of data being submitted by users
- ▶ Ensures copies of all document libraries are stored safely for compliance retention
- ▶ Provides search and retrieval for users and eDiscovery for administrators and compliance officers
- ▶ Offers enhanced retention management by ensuring data is deleted or removed when required
- ▶ Reduces back-up windows by removing large amounts of data from the Microsoft SharePoint servers and thereby improving system performance and enhancing the user perspective of their solution

With growing concerns about managing unstructured information and the increase in the number and size of sites, IT Managers are eager to find solutions that can alleviate the storage burden of Microsoft SharePoint, maintain system performance and improve end user productivity.

Archive One for SharePoint from C2C helps organizations control their storage costs, relieves administration headaches and ensures that business-critical information is always safely protected and instantly retrievable.

Providing much more than just archiving, Archive One offers fully automated data management to aid capacity, compliance, eDiscovery and retention management of data items from the moment they are received by the Microsoft SharePoint server until the time they are no longer needed.

Solves capacity problems

Archive One provides a totally intuitive, familiar interface that incorporates all the advanced features of email archiving for effectively working with data from Microsoft SharePoint. Archive One does not affect end users because the data management processes run automatically in the background. Archive One's data searching and intelligent actions allows administrators to carry out mass actions across different types of data to assist in compliance and storage capacity management.

Stores copies of all document library items

Archive One works without operator or user intervention. It links directly into the Microsoft SharePoint server. As items are submitted or updated, Archive One creates an archive copy and ensures it is safely committed to the archive. Secure archives can be stored onto existing storage or onto dedicated devices, such as WORM drives, to meet specific regulations. They can also be managed through third party storage applications.

Search and retrieval

Archive One indexes all items during the capture process. This increases search speeds and efficiency for finding data. Data can be searched for and retrieved by users, administrators or compliance officers according to permissions, either from within the product or through one of the latest search solutions such as Google Enterprise Server or Microsoft Search Server 2008.

Retention management

Archive One not only helps organizations avoid having too much data on Microsoft SharePoint servers, it provides critical Information Retention Management that allows organizations to meet regulatory obligations and to be prepared for eDiscovery. Information Retention Management features also allow administrators to put items on hold, apply tags (notes) to them, and cross reference.

Microsoft SharePoint documents are stored for regulatory requirements such as SEC, NASD, NYSE, Sarbanes-Oxley, ISO, HIPAA, BSI, Basel II and others and will aid with adherence to FRCP and Freedom of Information laws.

Reduces back-up windows

Archive One reduces the storage demands on primary storage, by offloading data to a secondary storage device. This reduces the backup/restore times on the main Microsoft SharePoint servers.

Availability

Archive One for SharePoint supports 'Windows SharePoint Services 3.0 and Microsoft Office SharePoint Server 2007 and is be available through C2C accredited resellers worldwide.

About C2C

C2C offers automated data archiving and management for email, files and SharePoint content, optimizing performance, reducing storage management costs and minimizing risks associated with critical data - helping you to control your data before it controls you.
